

Web Scraping

This code extracts a table from a Wikipedia page.

About the code

This project utilizes Wikipedia's Netflix page. A copy of the webpage can be found in the Data subfolder. From this webpage the Historical Financials and Membership Growth table is extracted using the BeautifulSoup library. This data is then loaded into a pandas dataframe and cleaned. From there the data is loaded into a Sqlite table.

Libraries Required

- Pandas
- Numpy
- BeautifulSoup
- Sqlite3
